

Big Display, Bigger Vision

Flytech is proud to announce that the new PPC K759 infotainment terminal equipped with a 21.5" large display screen will be launched to the market at the beginning of December 2011. The slim and true-flat screen is specifically designed for interactive information, communication, and entertainment for visitors in various environments. Empowered by Intel Sandy Bridge CPU Platform, the terminal performs excellent functions for graphic illustrations. Its advanced i5 chipset provides remote management technology for easy, convenient maintenance and repairs especially suitable for multi-terminal environments or chain store locations. In addition, optional resistive gesture or projected capacitive touch panel offers the utmost innovation for various applications.

PPC K759 is the perfect self-service solution for different environments such as shopping malls, hospitals, museums, government institutions and service centers where capacity and service are emphasized. Due to the frequencies of public use, the PPC K759 is made with anti-bacterial materials and certified by EN-60601-1-2 Medical Grade to help upkeep hygiene and at the same time offers easy maintenance to the staff. Combining pioneering technology with customer service ideas, visitors and patients as well as staff can easily access the PPC K759 to obtain multimedia information or to get other premium services. The PPC K759 is the ultimate tool for performance and the key to creating an enjoyable environment and experience for all.
